Fisiologia Humana. [5] [6] Show HN: Pull-up app for developers - jonathanheller ====== tapoxi This looks great! I like how easy it is to add or delete a job, but I think the price is too high. Maybe it's just the landing page, but I'm not a fan of the "you need to use our IDE to configure servers and build your app" sentiment on the website. It seems like you could have done that on the app itself (e.g. generate a docker image and some basic config) ~~~ jonathanheller Thanks! I'll take a look at the price. ------ bryansanderson Came here to comment on the pricing. Maybe I'm misunderstanding it, but the cost seems way off base for a startup. How long does it take to build apps? Let's say that's 10 hrs/week (which is way too low I feel). That's $15 per/hr. I'd guess the average developer is working for around 60 hours per week, so that's $600 per app. For example, I had a colleague who built a small utility app, checked in the code to GIT, then setup cloud-based CI/CD, all in less than a day. At that cost, he could have paid for his phone in a single-user instance of this tool (it's free as of today). That's cheap compared to

Category:Humans Category:Anatomy Category:Hereditary disorders of man Category:Lower limb anatomyI've got a pretty solid idea of what the roster should look like right now, and so, in the spirit of that, I've put together a few picks for some of the conference races. It's not really my thing to make these, I just want to give a little bit of credit to the people who I think are under the radar a little bit (I'm fairly sure I know who they are, I just won't name them, for obvious reasons) So, here we go...Safety and Efficacy of T-cell-redirected cytokine therapy in patients with metastatic cancer. Tumor-infiltrating lymphocytes (TILs) have been shown to proliferate and mediate tumor-specific killing in vivo. TILs are phenotypically distinct from host lymphocytes and so T-cell-redirected cytokine therapy is an attractive immunotherapy to mediate tumor-specific killing in vivo in patients with cancer. This review summarizes the safety and clinical efficacy data from two early phase clinical trials of TIL therapy: one trial that redirected activated T-cells transduced with a murine anti-human CD3-zeta molecule and interleukin (IL)-2 to target metastatic melanoma, and one that directed autologous T-cells transduced with human IL-2 to target metastatic colorectal cancer. Results demonstrate that the directed transduction of TILs with anti-CD3-zeta molecules and IL-2 may be a safe, feasible and effective therapeutic approach for patients with cancer./* * Copyright (c) 2008, 2009 Sun Microsystems. * All rights reserved.
