If you want to help with problems with Toon Boom Harmony 9.2.0 please post a new topic in the Support Forum. Toon Boom Harmony 9.2.0 as always is easy to install and update.Q: Xamarin.Android - How to find the layout root view? I'm trying to find the root view of a view that is included in a Fragment. The reason I need to do this is so that I can see if the current fragment is currently displayed on the UI or not. I've looked at the Android documentation, and it says that I should use FindViewById or FindViewWithTag. However the problem is, I'm not sure how to find the view. I'm wondering if there's any way to find a view that is included in a fragment using xamarin.android? I found a SO post that has a good idea but it's for iOS. Can anyone help with the xamarin.android version? iOS: var root = this.View.FindViewById<T>("RootView"); Android: var root = this.View.FindViewById<T>("Android:ViewRoot"); A: I've found a solution that works for Android using the ViewBinding class. Android: var

Toon Boom Harmony 9.2.0. 3.56 MB. TOON BOOM HARMONY 9.2.0 . Toon Boom Harmony is a comprehensive solution for handling every stage of the animation process, from design to final output. "); } This produces the following output: CAD/GW, 23/03/2013, Trips & Travel, AAA, 1, 1, 4020 Why is the written first? A: You can use this for (i = 0; i < body.length; i++) { document.write(body[i].value); document.write("
"); } Document.write is not the best way to build html Q: Querystring values encoding using php If a user posts a form in a page like this: then, if I use \$_GET in the newfile.php script, I only see the first querystring value. If a user posts a form in a page like this: then, if I use \$_GET in the newfile.php script, I see everything. How can I decode the %2C? I tried the following: echo urldecode(\$_GET['t']); But this is not working. A: There is no way to decode a "%2C" string. This is something which is given by the web server when generating the page. The server may accept any escape sequence, and 2d92ce491b
