Photoshop Adobe Photoshop is a photo manipulation software that has been developed from 1995 for Apple Macintosh. The first version, Photoshop 1.0, was released on 10 February 1996. The same year, Macintosh PowerBook G4 600MHz made its debut, and a faster version of the original Photoshop called Photoshop 1.5 powered a new high-performance Apple processor: the PowerPC G3. It is the most widespread application of the second generation of the Macintosh family. The Macintosh G3 was also the first Power Macintosh computer. The PowerPC G4's internal name is now Power Macintosh G4. The hardware comes as a barebones computer to be assembled by the customer. Adopting the new generation 64 bit PowerPC design now allows Photoshop to benefit from the hardware's 8-way multithreading and its integrated built-in 4 GB of RAM. In 2012, Adobe announced that Photoshop Lightroom would be ported to Mac OS X (later to be known as macOS) and eventually released on 15 September 2013. Photoshop Lightroom allows users to view, edit and manage images from camera, iPhone or iPad. Photoshop and Photoshop Elements are also available for Windows. On 18 June 2012, Adobe announced the discontinuation of Photoshop for Power Mac, Mac OS X and Windows operating systems, to be replaced by the newer version Photoshop CC. The older version Adobe Photoshop CS6 will still be sold but only on a renewable yearly basis. Adobe Photoshop Elements 2014 is a discontinued version of Photoshop. Photoshop CC is a version of Photoshop released in 2013 and is available for Windows, Mac OS X, Linux and Android. In 2012, a version for Android's tablets was introduced. The tablet version is targeted mainly at mobile photographers and is less suitable for professional uses. Even though Photoshop and Photoshop Elements share the same name, there are some differences between the two products. Photoshop has full functionalities for all the image types, whereas Photoshop Elements only handles RAW format. Photoshop Elements has fewer features and less compatibility options. It also has a simpler interface, which requires users to learn less about Photoshop, and all the features are displayed on the same window. The first versions of Photoshop were sold at \$999.00, which is very expensive for a program developed by Macromedia, the company that created Macromedia Flash, not to mention the current price, which is \$699 for the standard version and even lower for the student version. Adobe has released updates over the years to make it a681f4349e
