CodeTwo Exchange Migration enables you to migrate mailboxes from one domain to another with a native Exchange migration procedure. When it comes to the migration of the Exchange 2010 platform, CodeTwo Exchange Migration delivers the latest version of the migration technology that enables you to accomplish a secure and reliable migration of mailboxes from a source domain to a destination domain. This solution is of high value when you want to keep some of the users on the old version for a long period of time, while the rest of the users can be migrated to the new version. It does not require additional hardware and it does not need to configure additional software, neither does it require licensing. Migrating mailboxes from a source server to a destination server is not an easy task. The process requires the use of a tool that enables you to use the migration from one server to another and therefore, this tool must have the ability to export the data of the source server and import it on the destination server. CodeTwo Exchange Migration allows you to migrate mailboxes from one server to another. It includes a set of wizards to help you to configure the process and to move your mailboxes from the source domain to the destination domain. In addition to that, you can import all the imported mailboxes by using the same wizard. With CodeTwo Exchange Migration you can configure the migration process to ensure that it does not make any modifications on the new domain. In addition to that, you can set up the mailbox permissions for the destination domain. You can also verify the mailbox permissions of the destination domain and ensure that they have the same set of permissions that you have set up for the source domain.The Ultimate Guide To red hat exam Menu The Ultimate Guide To red hat exam Lots of providers go this method.
