Q: Non-orthogonal Beta variables Let k be a field and A a k -algebra. Suppose that we have a left A -module M and a k -algebra homomorphism $f: A \rightarrow \text{End}(M)$. If $f(A) \subset \text{End}_k(M)$, is it true that $f(A)$ is isomorphic to the matrix algebra $M_n(A)$ with n being the rank of M ? The question if there is a general condition characterizing non-orthogonal subspaces of a vector space also arises. For a subspace W of a k -vector space X the following conditions are equivalent: there is a k -vector space Y such that $X = W \oplus Y$, W is non-orthogonal, that is, $\langle v, w \rangle = 0$ for all $v \in W$ and $w \in W^\perp$, $\dim_k W \leq 1$. A: Yes. Let R be the endomorphism ring of M . We
